

Custom Terrazzo Colors Hard Samples

Featuring an Unlimited Color Selection

Master Terrazzo Technologies, experienced terrazzo installers, architects and design professionals collaborate on the initial concept of the terrazzo floor. Many award winning designs have been created by this interaction.

Master Terrazzo Technologies' hard samples are made from the selected epoxy matrix color and various aggregates specified. These hard samples are poured, ground, polished and sealed to duplicate what the actual floor installation will look like. This program is designed to ensure that the project designer and owners are satisfied with their selection.

Hard sample designs can be viewed from standard National Tile & Mosaic Association (NTMA) color palettes or Master Terrazzo Technologies' standard color selections. In most cases the selection of color and aggregate is a completely original mix. Master Terrazzo Technologies has

the ability and expertise to reproduce any color from the many color systems currently available into an epoxy matrix color.

The aggregate portion of the mix is found in an endless source of various colors and sizes of marble, glass, mirror, mother-of-pearl, etc. There are limitations in some aggregates such as all glass mixes that will affect the durability and appearance of the floor. These limitations need to be discussed when designing the terrazzo floors. The combinations of epoxy matrix color and aggregate produce a truly unique "one of a kind" design statement.

Our experienced sales staff would be pleased to discuss with you the endless possibilities in partnering with Master Terrazzo Technologies and the unique advantages offered by epoxy terrazzo flooring systems.
